

Configuration guide for Axiom DX8000 Portable Flex

Dear customer,

We are pleased that you have chosen one of our terminals. We have already tested your Axiom DX8000 Portable Flex extensively and prepared it for operation.

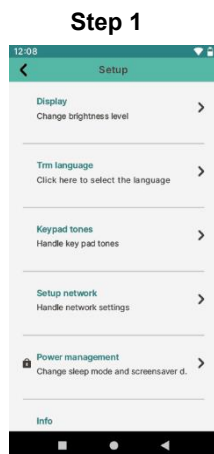

① **Please store this document carefully.** The information on your terminal will be needed in the event of service or subsequent initialisation.

	Terminal ID:	{{TerminalId}}
	ep2 Merchant-ID:	{{Ep2MerchantId}}
	Password:	{{TerminalPassword}}

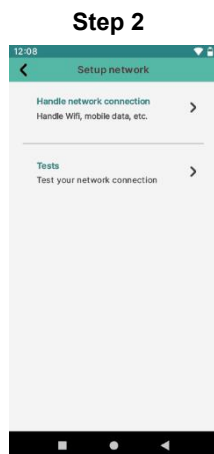

Connect to Wi-Fi

① All selections and confirmations in the following images are made directly on the relevant terminal display.

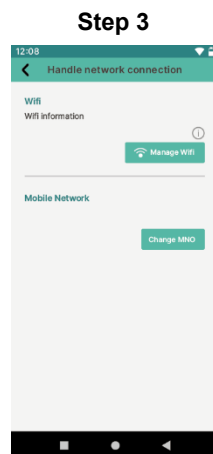

① To connect to Wi-Fi, open the terminal menu. The shortcut to the menu can be found on the left side on top of the display. Choose <Settings>. Configure Wi-Fi on the terminal as indicated below.

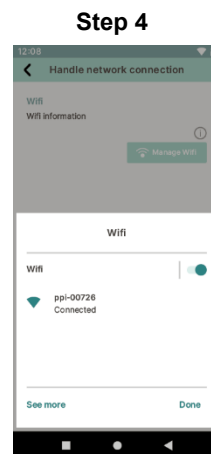

Select <Setup Network>.

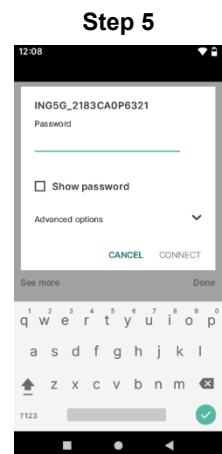

Select <Handle Network connection>.

Select <Manage Wi-Fi> to configure the parameters.

Select your network.

Enter your Wi-Fi password and press <Connect> to finish. Go back to the terminal application to start a payment.

Switching between the communication types

As soon as a Wi-Fi is available in addition to a mobile data communication, Wi-Fi becomes the main communication type. If Wi-Fi is not available for transmitting transactions (availability of less than 20%), the payment terminal switches automatically to 4G/LTE. The SIM card is already built in and activated on your terminal.
